

CFC Healthcare can help you with customized designs to fit your patient room requirements.

Combining different types of furniture into one piece is something we do on a frequent basis.

We take your idea and turn it into reality!

Once you have decided what Collection you want for your specification, we work with you to develop the customized product with you.

Incorporating different top and front styles enables you to provide a consistent look throughout the space.

We will provide a drawing and color rendering so you understand exactly what your specifications will look like in real life.

Please contact your local representative or CFC directly for assistance in getting started.
